

Selected-run evidence status: failed

Geometry

No matching geometry image or recorded mesh is available for this run.

Mesh

Mesh overview and local detail

No selected-run setup values are recorded.

Mesh overview unavailable: the selected run has no recorded mesh directory.

Setup

Recorded selected-case model

Contact friction coefficient	0.1	dimensionless
Foam curve scale	1	dimensionless
Time-step scale	0.6	dimensionless
Requested solver processors	4	

Solve

Recorded run status	failed
---------------------	--------

Separate solve charts

Contact force resultant

No extracted history for this result in the selected run.

Contact force resultant. No extracted source available.

Mass-weighted forward velocity

No extracted history for this result in the selected run.

Mass-weighted forward velocity. No extracted source available.

Moving assembly travel

No extracted history for this result in the selected run.

Moving assembly travel. No extracted source available.

Foam compression

No extracted history for this result in the selected run.

Foam compression. No extracted source available.

Regional P99 von Mises stress

No extracted history for this result in the selected run.

Regional P99 von Mises stress. No extracted source available.

Global energy

No extracted history for this result in the selected run.

Global energy. No extracted source available.

Results

Run 016 - impact evidence

Evidence status: failed. This report describes only extracted evidence from the selected run. Numerical checks alone do not establish physical qualification.

Geometry and model setup

Recorded model item	Value
kind	coupon

Solved mesh

No selected-run mesh summary is available. Mesh and timestep convergence are not established by these histories.

Motion and stopping event

Signed forward velocity, travel and foam compression are measured histories. Negative forward velocity denotes rebound; a partial history cannot establish the complete stopping event.

Measured result	Value	Unit
-----------------	-------	------

Regional stress and energy

Regional P99 values are elastic demand measures across saved states, not printed-part strength predictions. Force peaks and percentile peaks can occur at different times.

Numerical checks and qualification

No selected-run numerical check summary is available.

No extracted results are available for this run yet.

Images, animations and source evidence

- execution.json
- model.json

Generated from selected-run extracted evidence; no authored report is available. Animation figures and their captions are excluded from this PDF; animations remain available in the standalone HTML.
